

50 Important Unix and Git Commands

This PDF lists 50 essential Unix and Git commands with short descriptions. These commands are commonly used in development, system navigation, and version control workflows.

- 1 **pwd** — Print the current working directory.
- 2 **ls** — List directory contents.
- 3 **ls -l** — List files with detailed information.
- 4 **ls -a** — Show hidden files.
- 5 **cd** — Change directory.
- 6 **cd ..** — Move up one directory.
- 7 **mkdir** — Create a new directory.
- 8 **mkdir -p a/b/c** — Create nested directories.
- 9 **rmdir** — Remove empty directory.
- 10 **touch** — Create an empty file.
- 11 **cp** — Copy file.
- 12 **cp -r** — Copy directory recursively.
- 13 **mv** — Move or rename file.
- 14 **rm** — Delete a file.
- 15 **rm -r** — Delete directory and contents.
- 16 **cat** — Display file content.
- 17 **head** — Show first 10 lines.
- 18 **tail** — Show last 10 lines.
- 19 **grep 'text'** — Search text in file.
- 20 **find . -name '*.txt'** — Find files by name.
- 21 **chmod 755** — Change file permissions.
- 22 **chown user:group** — Change file ownership.
- 23 **whoami** — Show current user.
- 24 **uname -a** — System information.
- 25 **df -h** — Disk usage in human-readable format.
- 26 **git init** — Initialize a new Git repository.
- 27 **git clone** — Clone a repository from remote.
- 28 **git status** — Show repository status.
- 29 **git add** — Stage file for commit.
- 30 **git add .** — Stage all files.
- 31 **git commit -m 'msg'** — Commit staged changes.
- 32 **git log** — Show commit history.
- 33 **git log --oneline** — Compact commit history.
- 34 **git diff** — Show unstaged changes.
- 35 **git branch** — List branches.
- 36 **git branch** — Create new branch.
- 37 **git switch** — Switch to branch.
- 38 **git merge** — Merge branch into current.
- 39 **git branch -d** — Delete a branch.
- 40 **git remote -v** — Show remote repositories.
- 41 **git remote add origin** — Add remote repository.
- 42 **git push** — Push changes to remote.
- 43 **git pull** — Pull changes from remote.
- 44 **git fetch** — Fetch changes without merging.
- 45 **git stash** — Temporarily save changes.
- 46 **git stash pop** — Apply and remove stash.
- 47 **git tag v1.0** — Create a tag.
- 48 **git reset HEAD** — Unstage file.
- 49 **git checkout --** — Discard file changes.
- 50 **git reflog** — Show reference logs.
